

Monday 19th June

I can add multiples of 10 to 3 digit numbers.

In a school hall, there are 119 girls and 80 boys.
How many pupils are there altogether?

How can you solve this? Discuss with an adult.

You can use the counting on method you used last week when adding 2 2 digit numbers.

Count on in tens from 119.

$$119 + 80 = 199$$

119, 129, 139, 149, 159,
169, 179, 189, 199

Which digit changed in the answer?

Now practise using these:

$$40 + 928 =$$

$$608 + 80 =$$

How would you explain adding these to one of your friends?

Have a go at the worksheet.

Have a go at the challenge.
